

1. We wanna make the original key attributes mandatory in order to be more specific whenever the tuple is entered in volunteering. We wanna ensure the StudentID, CourseID and TermID are entered.
2. We wanna set up the referential integrity for the original key attributes that means whenever the original key attribute is entered we want to look up the value in the related parent entity to ensure it's a good value.
3. We wanna make sure the combination of the original key attributes is unique. We can create a unique index on the combination of the key attributes to enforce it.

So that the non-identifying relationship can be established and the business rule can be obeyed.
